

Hose Ancillaries

W7590 Series Hose Beckets

W7590 Series Hose Beckets

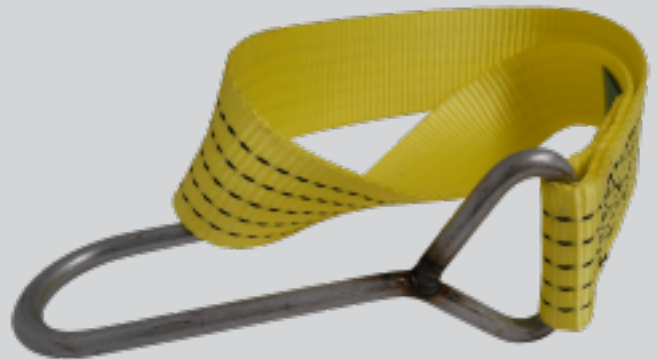

Polyester and Stainless Steel Hose Becketts are slings that carry the weight of suspended hoses from ladders or other support structures. Apart from the obvious "load lightening" benefits this keeps the hose clear of hazardous and potentially damaging environments as well as anchoring the hose, preventing it from slipping.

Fire Hosetech fabricate the hose becketts in the UK with a standard 350mm long loop but they can be tailored to suit a customer's individual requirements. They are designed for use with hoses up to and including 70mm diameter.

The becketts are manufactured using welded stainless steel hooks stitched into polyester webbing to give long life service even in the most challenging of environments.

Load Rating: 200kg when new.

W759030 350mm long
W759034 500mm long
