

Hose Beckets

The slings carry the weight of vertically suspended hose from ladders or any object, either to keep out of hazardous and potentially damaging environments or to anchor the hose and stop it from slipping.

The hose beckets are rated up to 200kg; the hook is manufactured from stainless steel and the sling itself from polyester giving it longevity of service in the most challenging of environments.

BATCH NO REO

We manufacture the hose beckets. As standard they have a 350mm long loop but can be made to your individual requirements.
