On Scene Hose Roller ROLLY IV

For more than 20 years, firefighters all over the world have used and loved the various ROLLY hose roller models, but many customers have asked for a hose roller with an adjustable hose guide, a hose-removal aid and non-pneumatic tyres.

The patented ROLLY IV is able to rewind deployed fire hoses on the ground in a fast, easy, and very comfortable way. Fire hoses up to 75 mm (3") diameter and a max. length of 23m (66ft) can be wound in dutch style or single wrap in as little as 10 seconds. The two non-pneumatic tyres makes the ROLLY IV completely maintenance-free and always ready to use on the scene.

The magnetically adhering sleeve on the winding fork ensures effortless shedding of firm and centre folded hoses. After the hose is wound, the new removing aid can be dropped off with the hose by lateral tilting of the ROLLY IV. The removing aid can be easily taken away from the coiled hose and be placed back on the winding bracket.

The folding support foot guarantees a fast and secure parking of the ROLLY IV at the scene. Thanks to the magnetic support foot, the ROLLY IV can be used quickly for winding dutch coiled hoses and protect the ROLLY IV from damage. The support foot of galvanized steel is held magnetically on the ROLLY IV and can be easily deployed by foot.

Material	Steel
Dimensions	1.400 x 430 mm 750 x 430 x 210 mm (inserted handle)
Weight	11,6 kg
W751707	Hose removal aid
W751708	Support foot
