

## HOSE ANCILLARIES

### W7590 series

#### Hose Beckets : Polyester and Stainless Steel

Hose Beckets are slings that carry the weight of suspended hoses from ladders or other support structures. Apart from the obvious "load lightening" benefits this keeps the hose clear of hazardous and potentially damaging environments as well as anchoring the hose, preventing it from slipping.

Fire Hosetech fabricate the hose beackets in the UK with a standard 350mm long loop but they can be tailored to suit a customer's individual requirements.

The beackets are manufactured using stainless steel hooks stitched into polyester webbing to give long life service even in the most challenging of environments.

Load Rating: 200kg when new.
