

W2040 Series Agri-Adaptors Inst BS336 x CamLock

These adaptors are designed to allow a pump unit to connect quickly to a water bowser on a farm when hydrants or open water sources may be too remote or else not available.

The most common combinations are shown here although there are many variations that can be fabricated quickly from existing component stocks and are readily available for despatch.

Cam Lock fittings, commonly aka Cam and Groove and Banjo fittings, are available in a wide range of sizes but it is anticipated that the 2" fitting will be the one in common usage.

Materials are typically light alloy inst. female to BS336 (UK manufactured) with Cam Locks in L/A or polypropylene usually sourced in the USA.

The maximum recommended w.p. for the assembly is 10 bar. With high incidence of wildfires and farm fires in the last few years FHT are now stocking "agri-adaptors" in addition to their existing wide range of wildfire fighting equipment.

We stock a wide range of fittings and if we haven't got it, we can certainly get it - please ask.
